

LED LIGHTING

Junair Spraybooths have developed an LED lighting system specifically designed for use in spray booths, paint mixing rooms and preparation areas. This new development follows the company's philosophy of continuous improvement and commitment to produce spray booth ovens that use a fraction of the energy that a conventional spray booth would.

Junair's high efficiency spray booths have been developed over the last 12 years, resulting in energy saving products such as automatic variable airflow, QADs auxiliary air movement and fuel saver technology. LED lighting is an expansion of the range of equipment offered which reduces operating and maintenance costs even further.

LED lighting is now regarded as the most efficient and cost effective technology for most lighting applications. The low energy requirement is significant on its own with savings as high as 90% when compared to conventional lighting. However, the long life span and very low maintenance elements make the use of LED lighting a must for companies who look at life-time operating costs.

The industry view is that fluorescent tubes will become more expensive as time goes on. They contain lead and mercury which means that disposal of old tubes needs to be controlled. LED lights have all the environmental benefits, low running costs and are virtually maintenance free. There will be a general shift to this lighting technology over the coming years.

The benefits of Junair's LED lighting system are:

- Energy savings of 60% with an increase in lux level
- 5 year manufacturer's warranty
- Significant reduction in maintenance cost and maintenance down time
- Life span is expected to be 10 to 20 years
- Sustained uniformity of light level and colour
- Excellent colour temperature for crisp, clear illumination
- Promotes green credentials of the purchaser and operator

Junair can install LED lighting in new spray booths and also as a retro-fit installation to existing spray booths.

For more information regarding Junair LED lighting please contact Peter Belding on 0404 608 622 or email sales@junair.com.au.
